

**Studio Pedestal 2-75**  
incl. 6 trim weights, pump

The Studio pedestal is not only incredibly simple to use – it is extremely user-friendly too. Camera operators can easily view the wheel positions at all times and operate the three individual wheel brakes from any position. The crab-and-steer function enables simple maneuvering with defined rolling turns. The power cable, of course, features extra padding to protect it from being crushed. In addition, most of the pedestal surfaces are rubber coated so you can push the unit with your feet, and the balance weights are covered in plastic to avoid contact with lead. A small steering wheel is available and can even be used with a teleprompter. Each model has a Quickfix fitting for fast and easy setups without screws. It takes just a few minutes to convert the Studio Ped into a Vario Ped for mobile use or to replace the standard studio wheels with large OB wheels or air wheels.

**Advantages of the Studio Pedestal:**

- safe air charging with pump or compressor
- pressure relief valve prevents damage to the column
- low operating costs due to air charging
- fast and problem-free conversion from Studio Ped to Vario Ped
- Crab & Steer function for easy maneuverability and defined cornering

**Technical Facts**

Recommended for	fluid heads Video 90; Video 25 Plus, Video 60 Plus and Video 75 Plus (with #3914)
